Microscope Stage Family with Ultrasonic Linear Drives

Extreme Stability, Low Profile, Fast Response, Direct Position Measurement

- Integrated Closed-Loop Linear Piezomotor Drives Provide Smooth Motion and High Speed to 150 mm/sec
- Significantly Higher Stability than Conventional Lead-screw-Driven Stages: Self-Locking at Rest, no Servo Dither
- Travel Ranges to 225x85mm
- Integrated Linear Encoders, Sensor Resolution to 0.1 µm
- Compact Design, Low Profile, Mounts Directly to Microscope
- Compatible with Piezo-Z and Piezo XYZ Scanning Stages

Compact Design
All PI microscope stages are designed for excellent stability. The PILine® piezomotor stages excel in precision positioning and automation applications. Their form factors are optimized for a low profile height; the mounting pattern is compatible with a variety of flexure actuated PI piezo nanopositioning / scanning stages.

10X Higher Stability
The PILine® stages are based on a completely different drive principle than conventional motorized translation stages. The compact integrated piezoelectric linear motors and linear encoders make both the lead screw duct and the bulky flanged, stepper motors employed in traditional stages obsolete. An ultrasonic ceramic piezo linear motor directly drives the moving platform. At rest the motor directly clamps the stage, without holding current, allowing the exceptional long term stability.

Compatibility to PI Nanopositioning and Scanning Stages
A number of standard PI piezo flexure stages can be mounted directly on the motorized stage. Depending on the application, these highly specialized, ultra-precise nanopositioning systems provide fast XYZ scanning (for fluorescence microscopy) or Z-motion (3D imaging, Z-stacks).

Inverted and Upright Microscopes
PILine® stages can be designed for inverted or upright microscopes. Talk to us about your application!

Advantages of PI Ultrasonic Motors over Classical Drives
- Self-Locking at rest, no servo dither, no heat
- Smaller Form Factor
- No vibration, smooth motion
- Higher acceleration, speed
- No rotating shafts, gears, ...
- Non-magnetic, vacuum compatible drive principle

Application Examples
- Biotechnology
- Microscopy
- Scanning microscopy
- Confocal microscopy
- Semiconductor test equipment

Ultrasonic motor XY microscope stage with inserted optional Piezo-Z scanning stage. Stages come with controller, joystick & software.

Customized long travel PILine® microscope stages

M-545 piezomotor microscope stage, 25x25mm travel range. The controller and a joystick is included with all systems.

*PILine® Microscope Stages have several advantages over classical stepper and electromagnetic motor stages: Stability: Self clamping, low heat generation at low speed, no heat at rest. Convenience: Lower noise than stepper motors. Precision and stiffness: direct drive and direct metrology encoders. Large dynamic range: Fast response and crisp settling, smooth and high velocity constancy even at low velocities of 20μm/sec.*

Program Overview

- Piezo Ceramic Actuators & Motors
- Piezo Nanopositioning Systems and Scanners
- Active Optics / Tip-Tilt Platforms
- Capacitive Nanometrology Sensors
- Piezo Electronics: Amplifiers and Controllers
- Hexapod 6-Axis Positioners / Robots
- Micropositioning Stages & Actuators
- Photonics Alignment Systems, Solutions for Telecommunications
- Motor Controllers
- Ultrasonic Linear Motors
